

TEMP-COAT 101 has been utilized as an insulation barrier to insulate metal structures to minimize heat gain on metal structures such as grain silos. Silos located in high ambient temperature regions are subject to product loss due to the extreme temperature created inside. TEMP-COAT 101 may be utilized to reduce the interior temperatures allowing stopping degradation of the stored contents. Below are examples of TEMP-COAT 101 being utilized in the Middle East to preserve and protect assets and their contents.
